

## Environmental Policy Statement

Mazdon Construction undertakes Building, Civil Engineering, and Design and Build projects, and is committed to managing environmental issues in a responsible and sensible manner.

In accepting our responsibilities to afford future generations the choices and opportunities that we are currently enjoying, the Company tenders, designs, plans and constructs projects that minimise the impact on the environment.

We have examined internal and external environmental issues and identified the areas of our business activities, products and services which interact with the environment. We are committed to responsibly manage these aspects of our business to prevent pollution, protect the environment from harm and degradation and to have a positive impact on the areas within which we work.

We have set objectives and targets within the framework of a programme for continual improvement. We monitor and measure our environmental performance through meaningful key performance indicators, regularly reviewing this progress against our stated objectives.

We will continue to promote sustainable construction objectives and apply techniques for the practical delivery of these principles in project specifications. In addition we will influence others with the Project Team to apply sustainable construction principles and deliver improved environmental performance where they have control or influence.

We will ensure compliance with all applicable legislative and other requirements which relate to the Company's environmental aspects through all stages of the project where MAZDON CONSTRUCTION has control.

We will acknowledge, respond and take in account of the views of the public and any other interested parties with respect to our operations and make this environmental policy available to them. In addition, this policy statement will be communicated to all persons working for or on behalf of MAZDON CONSTRUCTION.

**Alex Hemmings – Managing Director**
